Progress in calculation strategies

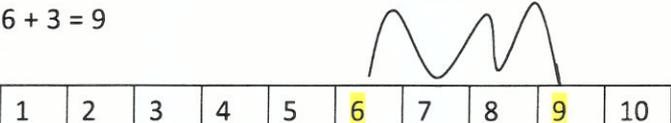

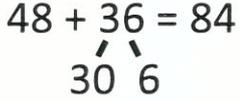

"Together we make a difference."

CALCULATION POLICY

These are the methods that we teach at school. Different year groups teach different methods and the policy shows how the methods change as the children move through the school.

Addition

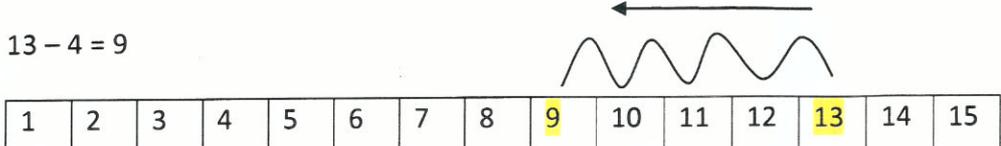

<i>The different stages</i>	<i>Example of what it looks like</i>
Stage 1 Counting sets of objects	
Stage 2 Combining 2 sets of objects into 1 group and counting practically.	For example for $6+2=$ the children may get 6 cubes, then 2 more and count how many altogether.
Stage 3 Drawing pictures/dots – informal jottings. Then counting how many altogether..	$4 + 2 = 6$ $* * * * + * *$
Stage 4 Counting on, on a number line with numbers on it.	$6 + 3 = 9$ 
Stage 5 Steps in addition can be recorded on a number line. The steps often bridge through a multiple of 10. 1) Partition the smaller number into tens and units 2) Add on the tens. 3) Add on the units.	$8 + 7 = 15$  $48 + 36 = 84$  

CALCULATION POLICY

<p>Stage 6 Partitioned numbers are then written under one another:</p>	$\begin{array}{r} 47 = 40 + 7 \\ + 76 \quad 70 + 6 \\ \hline 110 + 13 = 123 \end{array}$
<p>Stage 7 Write the numbers in columns. Add the tens first:</p>	$\begin{array}{r} 47 \\ + 76 \\ \hline 110 \\ 13 \\ \hline 123 \end{array}$
<p>Adding the units first:</p>	$\begin{array}{r} 47 \\ + 76 \\ \hline 13 \\ 110 \\ \hline 123 \end{array}$
<p>Stage 8 This then becomes the shorter method where numbers get carried into the next column.</p>	$\begin{array}{r} 47 \\ + 76 \\ \hline 123 \\ 11 \\ \hline \end{array}$
<p>Stage 9 Later, move to adding three two-digit numbers, two three-digit numbers and numbers with different numbers of digits.</p>	$\begin{array}{r} 258 \\ + 87 \\ \hline 345 \\ 11 \\ \hline \end{array}$

CALCULATION POLICY

Subtraction

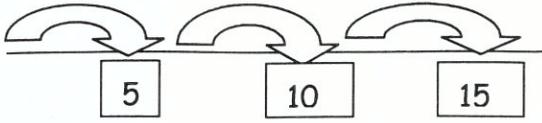

Stage 1 Practical	Practically get a group of objects and take some away.
Stage 2 Jottings Draw a set of objects and then cross some out.	$11 - 4 = 7$ 
Stage 3 Count back on a number line with numbers on.	$13 - 4 = 9$ 
Stage 4 Using a number line $74 - 27 = 47$ worked by counting back: Also working out the difference by counting on	 Work out the difference between 48 and 84 = 36 

CALCULATION POLICY

<p>Stage 5</p> <p>Partitioned numbers are then written under one another:</p> <p>This is how we start introducing the column subtraction method</p>	$74 - 23 =$ $\begin{array}{r} 70 + 4 \\ - 20 + 3 \\ \hline 50 + 1 \end{array} = 51$
<p>Stage 6</p> <p>(Exchange for 2 digit numbers)</p> <p>These show the 2 steps which lead to the shortened version of the column subtraction method. We always start with the units number.</p>	$74 - 27 =$ $\begin{array}{r} 70 + 4 \\ - 20 + 7 \\ \hline \end{array}$ $\begin{array}{r} \overset{60}{\cancel{70}} + \overset{14}{4} \\ - 20 + 7 \\ \hline 40 + 7 \end{array}$ $\begin{array}{r} \overset{6}{\cancel{7}} \overset{14}{4} \\ - 27 \\ \hline 47 \end{array}$
<p>Stage 7</p> <p>(Exchange for 3 digit numbers)</p> <p>The same method but for bigger numbers still starting with the units number.</p>	$\begin{array}{r} 700 + 40 + 1 \\ - 300 + 60 + 7 \\ \hline \end{array}$ $\begin{array}{r} \overset{600}{\cancel{700}} + \overset{130}{40} + \overset{11}{1} \\ - 300 + 60 + 7 \\ \hline 300 + 70 + 4 \end{array}$ $\begin{array}{r} \overset{6}{\cancel{7}} \overset{13}{4} \overset{11}{1} \\ - 367 \\ \hline 374 \end{array}$
<p>Stage 8</p> <p>(Exchange for 4 digits including 0)</p>	$\begin{array}{r} 4000 \ 900 \ 100 \\ - 5000 + 000 + 00 + 8 \\ - 1000 + 200 + 50 + 7 \\ \hline 3000 + 700 + 50 + 1 \end{array}$ $\begin{array}{r} \overset{9}{\cancel{10}} \ 10 \\ 5 \ 0 \ 0 \ 8 \\ - 1 \ 2 \ 5 \ 7 \\ \hline 3 \ 7 \ 5 \ 1 \end{array}$

CALCULATION POLICY

Multiplication

<p>Year 2 2 times table 5 times table 10 times table</p>	<p>Within this teach how to know facts i.e. 6 x 4 is 5 x 4 and then 1 x 4 9 x 4 is 10 x 4 and then take away 4</p>
<p>Year 3 2 times table 3 times table 4 times table 5 times table 6 times table 10 times table</p>	
<p>Year 4 Derive and recall division facts for all tables up to 10 x 10</p>	
<p>Stage 1 Counting practically in repeated groups/patterns</p>	
<p>Stage 2 Grouping</p>	<p>$3 \times 2 = 6$</p> 
<p>Stage 3 Arrays</p>	<p>$3 \times 2 = 6$ or $2 \times 3 = 6$</p> 
<p>Stage 4</p> <p>Repeated addition</p> <p>5 times 3 is $5 + 5 + 5 = 15$ or 3 lots of 5 or 5×3</p> <p>Repeated addition can be shown easily on a number line.</p>	<p>$5 \times 3 = 5 + 5 + 5$</p> <p style="text-align: center;">5 5 5</p> <p style="text-align: center;">0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15</p> 

CALCULATION POLICY

<p>Stage 5</p> <p>Partitioning</p>	$13 \times 5 =$ $10 \times 5 = 50 \quad 3 \times 5 = 15$ $50 + 15 = 65$												
<p>Stage 6 The grid method</p> <p>It is better to place the number with the most digits in the left-hand column of the grid so that it is easier to add the answers of each part of the multiplication together.</p> <p>$7 \times 38 =$</p>	<table border="1" style="border-collapse: collapse; text-align: center;"> <tr> <td style="padding: 5px;">×</td> <td style="padding: 5px;">7</td> <td style="padding: 5px;"></td> </tr> <tr> <td style="padding: 5px;">30</td> <td style="padding: 5px;"></td> <td style="padding: 5px;">210</td> </tr> <tr> <td style="padding: 5px;">8</td> <td style="padding: 5px;"></td> <td style="padding: 5px;">56</td> </tr> <tr> <td style="padding: 5px;"></td> <td style="padding: 5px;"></td> <td style="padding: 5px;">266</td> </tr> </table>	×	7		30		210	8		56			266
×	7												
30		210											
8		56											
		266											
<p>Stage 7: Long multiplication</p> <p>The next step is to show the method of recording in a column format, but showing the working. This links to the grid method above.</p> <p>Children should describe what they do by saying the actual values of the digits in the columns. For example, the first step in 38×7 is 'thirty multiplied by seven', not 'three times seven'.</p>	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%; vertical-align: top;"> $30 + 8$ $\times \quad 7$ $\hline 210$ 56 $\hline 266$ 38 $\times \quad 7$ $\hline 210$ 56 $\hline 266$ </td> <td style="width: 50%; vertical-align: top; padding-left: 20px;"> $30 \times 7 = 210$ $8 \times 7 = 56$ <div style="border: 1px solid black; padding: 10px; width: fit-content; margin-left: auto; margin-right: auto;"> <p>This is the slightly shorter version.</p> </div> </td> </tr> </table>	$30 + 8$ $\times \quad 7$ $\hline 210$ 56 $\hline 266$ 38 $\times \quad 7$ $\hline 210$ 56 $\hline 266$	$30 \times 7 = 210$ $8 \times 7 = 56$ <div style="border: 1px solid black; padding: 10px; width: fit-content; margin-left: auto; margin-right: auto;"> <p>This is the slightly shorter version.</p> </div>										
$30 + 8$ $\times \quad 7$ $\hline 210$ 56 $\hline 266$ 38 $\times \quad 7$ $\hline 210$ 56 $\hline 266$	$30 \times 7 = 210$ $8 \times 7 = 56$ <div style="border: 1px solid black; padding: 10px; width: fit-content; margin-left: auto; margin-right: auto;"> <p>This is the slightly shorter version.</p> </div>												
<p>Stage 8: Short multiplication</p> <p>The step here involves adding 210 and 50 mentally with only the 5 in the 50 recorded.</p>	38 $\times \quad 7$ $\hline 266$ <p style="text-align: center; margin-left: 40px;">5</p>												

CALCULATION POLICY

<p>Stage 9: Multiplying two, two digit numbers This follows the same steps as the first grid method but for 2 digit numbers.</p>	<table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td style="text-align: center;">×</td> <td style="text-align: center;">20</td> <td style="text-align: center;">7</td> <td></td> </tr> <tr> <td style="text-align: center;">50</td> <td style="text-align: center;">1000</td> <td style="text-align: center;">350</td> <td style="text-align: center;">1350</td> </tr> <tr> <td style="text-align: center;">6</td> <td style="text-align: center;">120</td> <td style="text-align: center;">42</td> <td style="text-align: center;">162</td> </tr> <tr> <td></td> <td></td> <td></td> <td style="text-align: center;">1512</td> </tr> <tr> <td></td> <td></td> <td></td> <td style="text-align: center;">1</td> </tr> </tbody> </table>	×	20	7		50	1000	350	1350	6	120	42	162				1512				1
×	20	7																			
50	1000	350	1350																		
6	120	42	162																		
			1512																		
			1																		
<p>Stage 10 : The amount of recording is reduced but children need to follow each step of the grid method still.</p>	<p>56×27 is approximately $60 \times 30 = 1800$.</p> <table style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td style="text-align: right;">56</td> <td></td> </tr> <tr> <td style="text-align: right;">× 27</td> <td></td> </tr> <tr> <td style="text-align: right;">1000</td> <td>$50 \times 20 = 1000$</td> </tr> <tr> <td style="text-align: right;">120</td> <td>$6 \times 20 = 120$</td> </tr> <tr> <td style="text-align: right;">350</td> <td>$50 \times 7 = 350$</td> </tr> <tr> <td style="text-align: right;">42</td> <td>$6 \times 7 = 42$</td> </tr> <tr> <td style="text-align: right;">1512</td> <td></td> </tr> <tr> <td style="text-align: right;">1</td> <td></td> </tr> </tbody> </table>	56		× 27		1000	$50 \times 20 = 1000$	120	$6 \times 20 = 120$	350	$50 \times 7 = 350$	42	$6 \times 7 = 42$	1512		1					
56																					
× 27																					
1000	$50 \times 20 = 1000$																				
120	$6 \times 20 = 120$																				
350	$50 \times 7 = 350$																				
42	$6 \times 7 = 42$																				
1512																					
1																					
<p>The amount of recording is reduced more.</p>	<p>56×27 is approximately $60 \times 30 = 1800$.</p> <table style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td style="text-align: right;">56</td> <td></td> </tr> <tr> <td style="text-align: right;">× 27</td> <td></td> </tr> <tr> <td style="text-align: right;">1120</td> <td>56×20</td> </tr> <tr> <td style="text-align: right;">392</td> <td>56×7</td> </tr> <tr> <td style="text-align: right;">1512</td> <td></td> </tr> <tr> <td style="text-align: right;">1</td> <td></td> </tr> </tbody> </table>	56		× 27		1120	56×20	392	56×7	1512		1

CALCULATION POLICY

Division

Deriving and recalling division facts

Year 2

2 times table
5 times table
10 times table

Year 3

2 times table
3 times table
4 times table
5 times table
6 times table
10 times table

Year 4

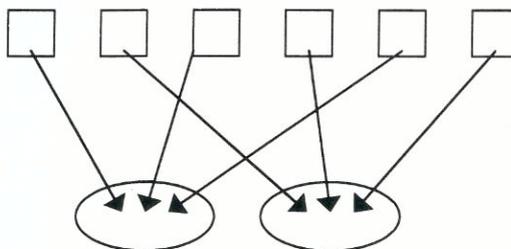

Derive and recall division facts for all tables up to 10×10

Stage 1

Children will develop their understanding of division and use jottings to support calculation

Sharing equally

6 sweets shared between 2 people, how many do they each get?

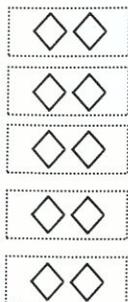

Grouping or repeated addition

There are 6 sweets, how many people can have 2 sweets each?

So $10 \div 2 = 5$

Or alternatively arrays can be used.

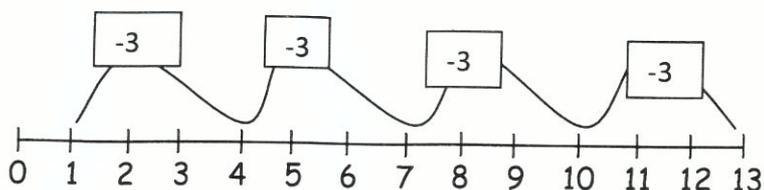

CALCULATION POLICY

Stage 2

Children should also move onto calculations involving remainders through repeated subtraction.

Repeated subtraction using a number line or bead bar

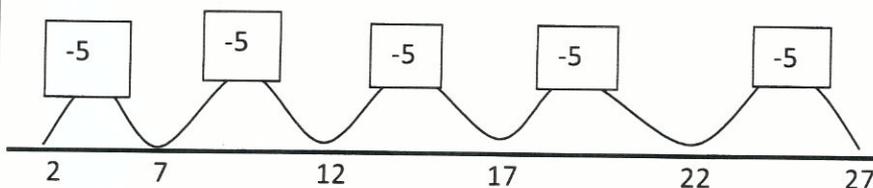

$$13 \div 3 = 4r1$$

Stage 3

Children will develop their use of repeated subtraction to be able to subtract multiples of the divisor. Initially, these should be multiples of 10s, 5s, 2s and 1s – numbers with which the children are more familiar.

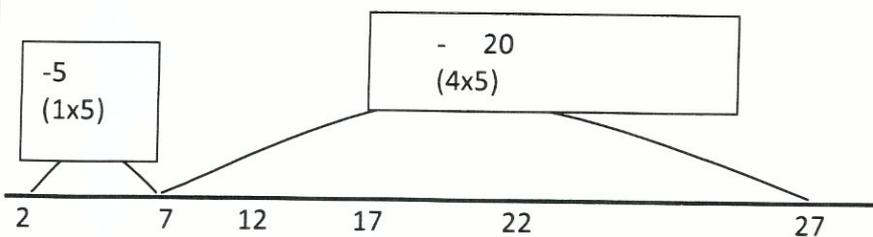

$$27 \div 5 = 5r2$$

Stage 4

Moving onto:

$$27 \div 5 = 5r2$$

CALCULATION POLICY

<p>Stage 5 TU÷U Then onto the vertical method:</p>	<p>$72 \div 3$</p> $ \begin{array}{r} 3 \overline{) 72} \\ \underline{- 30} \quad (10 \times 3) \\ 42 \\ \underline{- 30} \quad (10 \times 3) \\ 12 \\ \underline{- 6} \quad (2 \times 3) \\ 6 \\ \underline{- 6} \quad (2 \times 3) \\ 0 \end{array} $ <p>Answer: 24</p> 
<p>Stage 6 HTU÷U Introduce subtracting larger multiples of ten. This is called chunking.</p>	<p>$256 \div 7$</p> $ \begin{array}{r} 7 \overline{) 256} \\ \underline{- 70} \\ 186 \\ \underline{- 140} \\ 46 \\ \underline{- 42} \\ 4 \end{array} $ <p>36 r 4</p> $ \begin{array}{r} 10 \times 7 \\ 20 \times 7 \\ 6 \times 7 \end{array} $

CALCULATION POLICY

Stage 7: Long division HTU÷U

How many packs of 24 can we make from 560 biscuits? Start by multiplying 24 by multiples of 10 to get an estimate. As $24 \times 20 = 480$ and $24 \times 30 = 720$, we know the answer lies between 20 and 30 packs. We start by subtracting 480 from 560.

$$\begin{array}{r} 24 \overline{) 560} \\ 20 - \underline{480} \quad 24 \times 20 \\ \quad 80 \\ \quad 3 \quad \underline{72} \quad 24 \times 3 \\ \quad \quad 8 \end{array}$$

Answer: 23 R 8

In effect, the recording above is the long division method, though conventionally the digits of the answer are recorded above the line as shown below.

$$\begin{array}{r} \quad 23 \\ 24 \overline{) 560} \\ \quad -\underline{480} \\ \quad \quad 80 \\ \quad \quad -\underline{72} \\ \quad \quad \quad 8 \end{array}$$

Answer: 23 R 8
